
The Keystone Fresh Act: **FAQ**

Q: What is the PA Farm to School Network?

A: [The PA Farm to School Network](#), formally established seven years ago, is a resource and advocacy collaborative that includes representatives from state agencies, non-profit organizations and industry associations that actively support farm to school interests and activities throughout the Commonwealth. The Network is steered by a leadership team of eleven [individuals/entities](#) and 35 active working group members and engages hundreds of general members from 54 of PA's 67 counties.

Q: Who supports the Keystone Fresh Act HB 2420?

A: The [Keystone Fresh Act HB 2420](#) was introduced by Representative Danilo Burgos (D) and Jonathan Fritz (R) and co-sponsored by an additional 34 PA legislators from both the Democratic and Republican parties. Along with the PA Farm to School Network, over 60 PA based organizations, associations and businesses support this bill, including: The PA Farm Bureau, Pasa Sustainable Agriculture, The School Nutrition Association of PA, PA Cattlemen's Association, Feeding Pennsylvania, family farms, school districts, food banks, food distributors and food aggregators. See the [full list of supporters!](#)

Q: What local food products are eligible expenses for the Keystone Fresh Act grants?

A: Whole and minimally-processed fruits, vegetables, herbs, meat, seafood, yogurt, cheese, legumes and grains that are grown, harvested, or raised and minimally processed products in Pennsylvania.

Q: How many schools in PA already purchase local food for school meals?

A: Pennsylvania has a long history of interest in Farm to School programs with more schools participating each year. Almost half of the school districts in PA reported participating in some level of farm to school activity,¹ including serving local food products in their school meals. Despite this growth and interest, barriers prevent many PA family farmers from accessing the PA school food market which serves more than 157 million lunches annually!

Q: What are the barriers to purchasing and serving local food for school meals?

A: First, family farmers and producers struggle to access the school food market due to school meal standard requirements and competition with larger distributors. Second, sourcing, affording, and preparing local products can be challenging for school districts limited by federal funding and kitchen infrastructure for scratch cooking. As a result, less than 2% of the National School Lunch program funds spent by PA schools are used to purchase local PA foods.²

Q: How will the Keystone Fresh Act address the common barriers to purchasing and serving local food for school meals?

A: The Keystone Fresh Act will provide three specific grant opportunities to address common barriers: 1) The Fresh Schools Grant Program will reimburse school districts for the purchase of local food used in school meals, incentivizing the purchase of PA food products 2) The Keystone Producer Grant Program will award grants to participating farms, food hubs and local food aggregators for equipment and marketing needed to meet school meal standards, and 3) The Keystone Assistance Grant Program will award technical assistance grants to PA-based nonprofits and institutions of higher education to foster connections and ensure that both school districts and PA family farmers/growers can best utilize the funds.

Q: How did the Keystone Fresh Act (PA's Local Food Purchasing Incentive) utilize lessons learned from existing programs in other states?

A: Information reviewed from a comprehensive research assessment³ of the 16 existing state Local Food Purchasing Incentive policies and an investigative report⁴ completed by the PA Department of Education and Project PA have helped inform the Keystone Fresh Act.

Q: Why is the definition of local specific to PA products instead of based on a geographic distance?

A: PA tax dollars should be invested in PA farmers and PA schools. The intent of the Keystone Fresh Act is to develop the resilience of Pennsylvania's food system and increase food security among communities across the Commonwealth. School districts are encouraged to use alternative funds for local foods based on any additional definitions they use.

Q: Why is fluid dairy milk not included in the eligible expenses for the Keystone Fresh Act grant?

A: Fluid dairy milk is an essential part of child nutrition that is already included in every USDA meal program as a requirement for full reimbursement. Milk, by nature of its perishability, tends to be regional if not local and 73% of PA schools report serving local milk on a daily basis in their nutrition programs.⁵ Other dairy-based products like yogurt and cheese are allowable costs in the Keystone Fresh Act because, unlike fluid milk, farmers experience market accessibility and cost barriers to selling these products to schools. The intent of the Keystone Fresh Act is to open up new market opportunities for PA producers and increase the volume and variety of PA food products in school meals. PA dairy farmers stand to benefit from The Keystone Fresh Act by selling these non-fluid dairy products to schools.

Q: How much funding does the Keystone Fresh Act require to make a meaningful impact?

A: The Keystone Fresh Act should be funded as a \$15 million total biennial program with roughly \$8 million of the total funds spent on PA food products. This amount would **double** the total amount of reported school meal dollars spent on PA local food and would be multiple times the amount that has ever been invested in connecting PA agriculture and schools despite the decades-long interest in expanding local food served in school meals throughout the state. Pennsylvania was once considered a leader and innovator in the national farm to school movement and now we rank 22 out of 50 states when it comes to local foods served in school meals.⁶ It's time for legislators to make a significant investment by funding the Keystone Fresh Act - a program model that benefits all of Pennsylvania.

Q: Doesn't PA already provide grants for local food procurement through the Farm to School Program in the PA Farm Bill?

A: While there is a PA Farm to School Grant program in the PA Farm Bill, the funds are not spent solely on purchasing local food for school meals or snacks and the maximum grant award is \$15,000. This program is significant and important for ECE programs and schools just beginning their farm to school journey and offers essential financial support for other components of farm to school including food and agriculture education and school gardens. Higher grant award amounts are necessary to make a significant impact on schools' food purchasing behavior and our regional economies.

Q: Why are the Keystone Fresh Act grants only available for K-12 schools and not for Early Care and Education (ECE) programs?

A: The PA Farm to School Grant program offers ECEs financial support to offset the cost of purchasing local food and for the majority of ECEs the \$15,000 max grant award is more than enough to make a meaningful impact. ECE meal programs are not funded in the same uniform way as most K-12 schools are, so including ECE programs in the Keystone Fresh Act would demand additional administrative responsibilities and costs from multiple state agencies.
